Contents

Chapter 1 Introduction 1

1.1 Historical Sketch 1
Communication Theory, 2, Randomness, 5, Probabilistic Formulation of the Communication Problem, 6
1.2 Plan of the Book 8
1.3 The Role of Communication Theory 10

Chapter 2 Probability Theory 12

2.1 Randomness in the Real World 12
Random Experiments, 13, Relative Frequencies, 14
2.2 Mathematical Model of Probability Theory. . . 15
Fundamental Definitions, 16, Ancillary Definitions, 18, Properties, 19, Probability Systems, 20, Relation of the Model to the Real World, 24, Conditional Probability, 29, Statistical Independence, 31
2.3 Random Variables 37
Distribution Functions, 38, Density Functions, 44, Multidimensional Density Functions, 57, Equality of Random Variables, 58, Transformation of Variables, 58, Conditional Probability Density, 65, Mixed Probability Expressions, 73, A Communication Example, 77
2.4 Expected Value 84
The Fundamental Theorem of Expectation, 85, Moments, 88
2.5 Limit Theorems 94
The Weak Law of Large Numbers, 96, Chernoff Bound, 97, Central Limit Theorem, 106
Appendix 2A Reversible Transformation of Random Vectors . 111
Problems 114

Chapter 3 Random Waveforms **129**

3.1 Random Processes 129
Interpretation of the Random-Process Model, 131, Random Vectors Obtained from Random Processes, 132, Specification of Random Processes, 133, Stationary Random Processes, 135 . . . . . .
3.2 Filtered Impulse Noise 144
Statistical Characterization, 145, Statistical Dependency, 148, Joint Gaussian Density Function, 151
3.3 The Multivariate Central Limit Theorem 156
Joint Characteristic Functions, 157, Central Limit Argument, 160, Gaussian Random Variables, 163, Filtered Impulse Noise Process, 164, Properties of Gaussian Random Variables, 164, The Multivariate Gaussian Density Function, 168
3.4 The Gaussian Process 171
Specification of Gaussian Processes, 172, The Correlation Function, 174, Stationary Gaussian Processes, 175, Gaussian Processes through Linear Filters, 177
3.5 Correlation Functions and Power Spectra 179
The Expectation of an Integral, 179, Power Spectrum, 181, Jointly Gaussian Processes, 186, White Gaussian Noise, 188
Appendix 3A Matrix Notation 192
Definitions, 192, Properties of Matrix Multiplication, 196, Inverse Matrices, 197
Problems 199

Chapter 4 Optimum Receiver Principles **211**

4.1 Basic Approach to Optimum Receiver Design . . 212
4.2 Vector Channels 212
Decision Regions, 214, Additive Gaussian Noise, 216, Multivector Channels, 219
4.3 Waveform Channels 223
Waveform Synthesis, 223, Geometric Interpretation of Signals, 225, Recovery of the Signal Vectors, 227,

Irrelevant Data, 229, Joint Density Function of the Relevant Noise, 232, Invariance of the Vector Channel to Choice of Orthonormal Base, 232
4.4 Receiver Implementation 233
Correlation Receiver, 234, Matched Filter Receiver, 234, Component Accuracy, 244
4.5 Probability of Error 245
Equivalent Signal Sets, 246, Rectangular Signal Sets, 248, Orthogonal and Related Signal Sets, 257, Completely Symmetric Signal Sets and A Priori Knowledge, 263, Union Bound on the Probability of Error, 264
Appendix 4A Orthonormal Expansions and Vector Representations 266
Problems 273

Chapter 5 Efficient Signaling for Message Sequences . . 285

5.1 Sequential Sources 285
Source Rate, 286, Transmitter Power, 287
5.2 Bit-by-Bit and Block-Orthogonal Signaling 288
Bit-by-Bit Signaling, 289, Block-Orthogonal Signaling, 290, Geometric Interpretation, 292
5.3 Time, Bandwidth, and Dimensionality 293
Signal Dimensionality as a Function of T, 294, Bandwidth Requirements with Block-Orthogonal Signaling, 296
5.4 Efficient Signal Selection 297
Signaling with Sequences of Binary Waveforms, 298, Signaling with Multilevel Sequences, 309
5.5 Channel Capacity 320
Capacity Theorem, 321, Proof of the Capacity Theorem, 323, Discussion, 341
5.6 Reliability Functions 341
Block-Orthogonal Signaling, 342, Other Channels, 346
Appendix 5A Bandwidth-Constrained Orthonormal Functions, 348
Constrained Linear Combinations 349
Constrained Orthonormal Functions 350
Discussion 351
Appendix 5B Bandlimited Waveforms 352
Appendix 5C Optimization of R_0 354
Appendix 5D The Volume of an N-Dimensional Sphere . 355
Problems 357

Chapter 6 Implementation of Coded Systems 363

6.1 Transmitter Implementation 365
The Encoding Problem, 366, Recapitulation of the Derivation of R_0, 368, Parity-Check Codes, 369

6.2 Receiver Quantization 386
Measure of Degradation, 389, The Quantized-Channel Model, 390, Calculation of R_0', 392, Calculation of R_0' with Increasingly Fine Quantization, 396, Comparison of Quantization Schemes, 399

6.3 Binary Convolutional Codes 405
The Binary Symmetric Channel, 406, Convolutional Encoders, 409, Error Probability, 416

6.4 Sequential Decoding 425
Tree Searching, 426, Basic Concepts, 429, The Fano Algorithm, 431

6.5 Summary of Results 439
Analytical Results, 439, System Evaluation, 440, Simulation Results, 444, Dynamical Decoding Behavior, 446, Two-Way Strategies, 454, Experimental System Design, 456

Appendix 6A Extension and Analysis of the Fano Algorithm 462
Error Probability, 464, Mean Computation, 473

Problems 476

Chapter 7 Important Channel Models 485

7.1 Effects of Filtering 485
Filtered-Signal Channels, 485, Theorem on Reversibility, 488, Additive Nonwhite Gaussian Noise, 489

7.2 Bandpass Channels 492
DSB-SC Modulation, 493, Single-Sideband Modulation, 504, Comparison of DSB-SC and SSB, 507

7.3 Random Amplitude and Phase 508
Random Amplitude, 508, Random Phase, 511

7.4 Fading Channels 527
Scattering Model, 529, Single Transmission, 532, Diversity Transmission, 533, Optimum Diversity, 549

7.5 Coding for Fading Channels 550
Unquantized Receiver, 551, Binary Quantization, 555, Null-Zone Quantization, 557, Discussion, 560

Appendix 7A Whitening Filters 561
Appendix 7B Convexity 563
Extension to Nonconvex Functions, 567
Appendix 7C Lemma 570
Problems 574

Chapter 8 Waveform Communication 581

8.1 Linear Modulation 583
Single-Parameter Input, 583, Sequences of Input Parameters, 594, Waveform Inputs, 598 .
8.2 Twisted Modulation 611
Geometrical Considerations, 611, Pulse-Position Modulation, 623, Frequency-Position Modulation, 642
8.3 Frequency Modulation 645
Signal Bandwidth, 646, Weak-Noise Suppression, 649, Probability of Anomaly, 661
8.4 Channel Capacity 666
8.5 Pulse-Code Modulation 674
Conventional PCM, 675, PCM with Error Correction, 676
Appendix 8A The Sampling Theorem 678
Appendix 8B Optimum Mean-Square Linear Filtering . . 683
Unrealizable Filters, 686, Realizable Filters, White Input, 687, Mean-Square Error, 689, Nonwhite $x(t)$, 691
Appendix 8C Determination of the Probability that $n_s(t)$ Crosses Zero during a Short Interval 691
Appendix 8D Weak-Noise Performance of FM Feedback Receivers 694
Problems 698
